

MultiSensor-LAN

✓ Rack- and Room surveillance

✓ All-in-one room surveillance

✓ Alerting by E-Mail or SNMP trap

✓ Integrated webserver

Abstract

Multisensor-LAN, Network compatible IT room surveillance according to basic protection

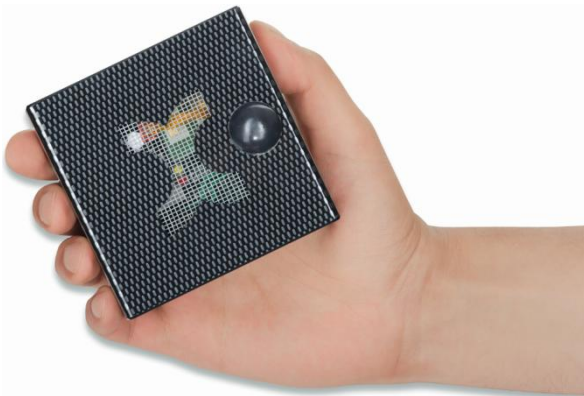

Features

- Rack- and room surveillance up to 20 m²
- Application: Rack monitoring or room monitoring via SNMP network monitoring
Extension AlarmManager-PRO
- All-in-one room surveillance
- Power-over-Ethernet (PoE) or external power supply
- Alerting by e-mail or SNMP trap
- Integrated web server
- Dimensions (HxWxD): 45x90x90 mm

Product Overview

With the MultiSensor-LAN, you get a reasonable stand-alone monitoring solution for the monitoring of IT racks and server rooms. The MultiSensor-LAN is powered by Power over Ethernet (PoE). The configuration is done easily via the integrated web server. Through the supplied SNMP MIB (Management Information Base), the individual measured values can be read with any SNMP enabled monitoring device. For a comprehensive monitoring solution, the MultiSensor-LAN can be combined with the AlarmManager-PRO.
