Safety Precautions

- Only use the device within the specified temperature range for: 0 ~ 40°C
- When not in use, store the product in a clean and dry place in temperatures between 0°C and 40°C
- Do not let the indoor devices come into contact with liquids
- Ensure that the indoor devices are only used inside. These devices are not intended for outdoor use and would be damaged
- During thunderstorms, there is a danger of lightning strike and due to overvoltage damage to connected electrical appliances
- Do not install the product during a thunderstorm
- Disconnect the product from power source during a thunderstorm
- Keep the devices outside the reach of children, since these components can be dangerous
- Never try to repair the device by yourself. Repair and maintenance work must be carried out by specialists
- In case of problems contact our customer service
- Dust, humidity and vapours as well as sharp cleaning agents or solvents can damage the product
- Disconnect the product from the power source before cleaning
- Clean the product with a slightly damp, lint-free cloth

Chapter 1 Product Overview

DS-13020 DIGITUS 1-Port USB 2.0 Multifunction Network Server

DS-13023 DIGITUS 4-Port USB 2.0 Wireless Multifunction Network Server

1.1 Package Contents

Verify that nothing is missing from the package by using the checking list below. Please contact your dealer if anything is missing or damaged. All packing materials are recyclable. Please confirm the items in the package below:

- This Server
- CD (Control Center and User's Manual and Quick Installation Guide)
- Power Adaptor
- Quick Installation Guide

1.2 Product CD

This CD provides easy-to-use Control Center software, and the User's Manual and Quick Installation Guide.

1.2.1 Start-up Procedures

If your computer is configured to auto start CDs, this CD will start automatically when inserted. You can also navigate to the CD and start the autorun.exe file from within the Windows file manager.

1.3 Supported USB Devices

The USB device server supports the following types of USB devices.

- USB Printer
- USB multifunction printer (MFP/AIO)
- USB scanner
- USB storage (like USB external HD, flash disk, and digital camera)
- USB speaker
- USB camera
- USB digital TV tuner
- USB webcam
- USB CD
- USB DVD
- iPod
- iPhone

Chapter 2 Basic Installation

2.1 Connecting the Hardware

1. Make sure that your USB devices are switched off and that the Server's Power Adapter is disconnected.
2. Connect the USB devices to the USB ports with the USB cables.
3. Connect the Server to the network with a twisted-pair category 5 cable, 10baseT or 100baseTX.
4. Turn on the USB devices and make sure it is ready for use.
5. Connect the Power Adapter to the Server. The power indicator will light up and USB1 and USB2 indicators will flash in turn. When the Link indicator lights up, the Server is correctly connected to the network. When USB1 and USB2 indicators stop flashing, the Server starts to work normally.

2.2 Wireless connection

This section only applies to DN-13023.

2.2.1 Preliminary

- Before you can access wireless network, wireless parameters should be set correctly. You **have to** setup the first wireless parameter set through LAN (wired) connection.
- Wireless access can be set as infrastructure (station) mode, which need an access point to route network messages with the same SSID.
- Wireless access can be secured by WEP (64/128), WPA-PSA (TKIP/AES), and WPA2-PSK (AES).
- In infrastructure mode, if network administrator wants to change any security related parameters, DN-13023 **should be** changed first, and then access point. If parameters mismatch causes wireless access is not allowed, you **have to** modify those parameters through LAN connection.
- In infrastructure mode, the maximal transfer rate is 150Mbits depending on access point's capability.

2.2.2 Set Wireless Configuration Using Control Center

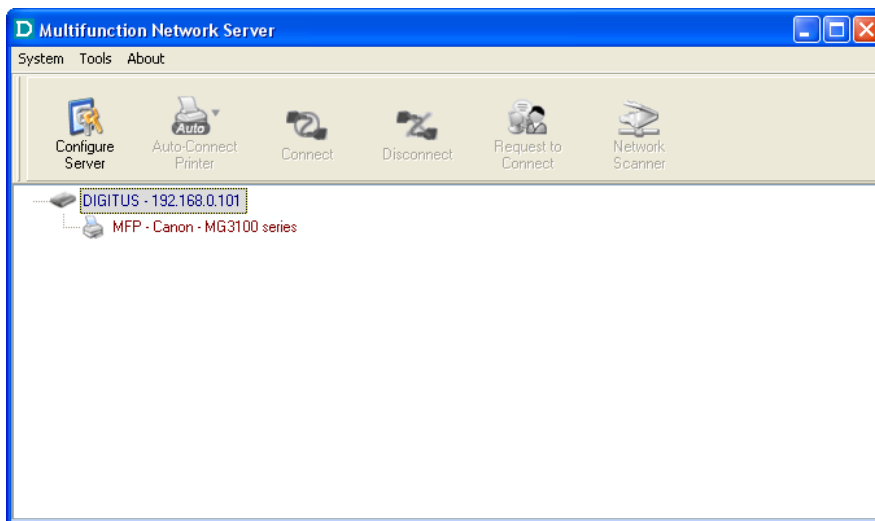

1. Install USB Device Server Control Center. It is available in the DN-13023 USB Device Server Product CD.
2. Start USB Device Server Control Center and Auto-searching USB device server window will appear.

3.

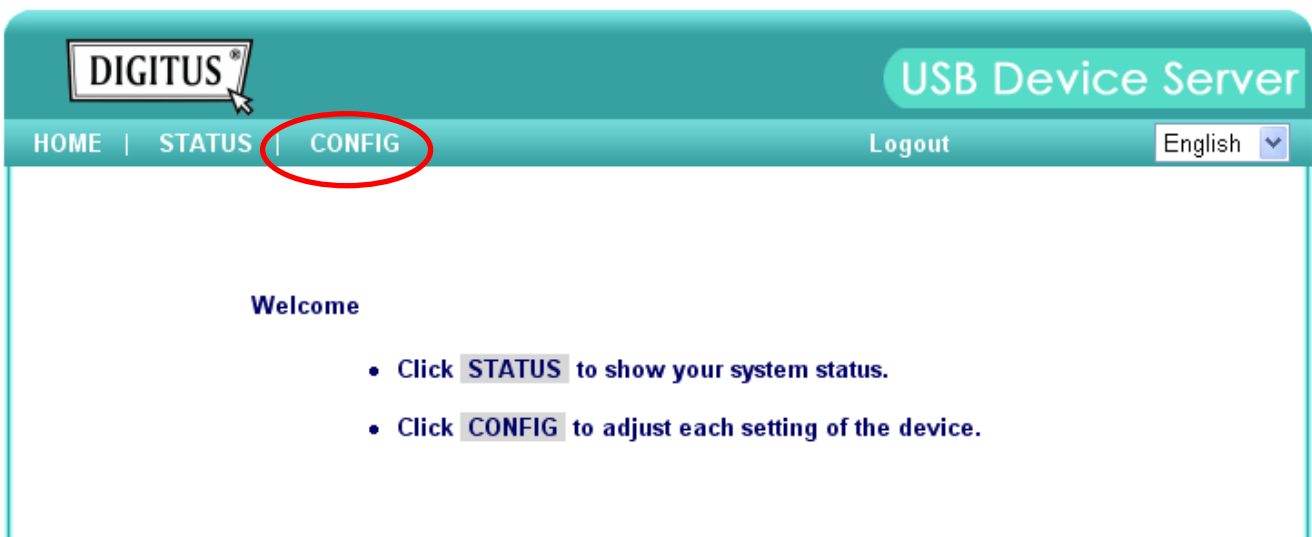

✎ If the wireless parameters are not correct or not set yet, you have to use LAN to access USB Device Server Control Center.

4. If the tool finds USB device servers in your local area network, then you have to select a server from the server list.

5. Double click the highlighted server (or click the "Configure Server" button) to get the server's web pages. Click CONFIG icon.

6. Login with administrator ID (default: *admin*) and its password (default: *admin*).

Login

Administrator

Password

7. Click **Wireless** icon.

DIGITUS USB Device Server

HOME | STATUS | CONFIG Logout English

General **Wireless** Administrator Maintenance

Basic

Station Name 00-11-E5-FE-FE-20

Network Type

SSID 32 letters[max.]

Security

Security System

Site Survey Setting

Scan AP

WPS Setting

WPS Enable Disable

8. In order to join an existing wireless network, you have to set the correct SSID, and the correct security method with the correct key information.
9. If the wireless network is secured by WEP64 or WEP128, key index and WEP key must be set correctly.

The screenshot displays the configuration interface for a DIGITUS USB Device Server. The top navigation bar includes 'HOME', 'STATUS', 'CONFIG', 'Logout', and a language dropdown set to 'English'. The 'CONFIG' section is active, with sub-tabs for 'General', 'Wireless', 'Administrator', and 'Maintenance'. The 'Wireless' tab is selected, showing 'Basic' and 'Security' settings. Under 'Basic', the Station Name is '00-11-E5-FE-FE-20', Network Type is 'Infrastructure', and SSID is 'DIGITUS'. Under 'Security', the Security System is 'WEP', and WEP Settings include Authentication set to 'Open System', Key Size set to '64 Bit (Hex - 10 chars)', and Key 1 set to '0123456789'. A 'Site Survey Setting' section is partially visible at the bottom.

10. If the wireless network is secured by WPA-PSK or WPA2-PSK, the key formats, shared key and encryption must be set correctly.

The screenshot shows the configuration page for a DIGITUS USB Device Server. The interface is in English and has tabs for General, Wireless, Administrator, and Maintenance. The 'Wireless' tab is active. The 'Basic' section includes fields for Station Name (00-11-E5-FE-FE-20), Network Type (Infrastructure), and SSID (DIGITUS). The 'Security' section is configured for WPA-PSK with a passphrase key format and TKIP encryption. A red box highlights the 'Passphrase (8~63 chars)' dropdown, the 'AA12345678' text input, and the 'TKIP' dropdown. A note below states: 'Note: WPA-PSK/WPA2-PSK is not available with ad-hoc networks.' The 'Site Survey Setting' section has a 'Scan AP' button with an 'Enter...' field. The 'WPS Setting' section is partially visible at the bottom.

11. Click **Submit** to save your settings. And the server will reboot.
12. You have now finished the procedure of setting the wireless parameters.

After properly configuring the wireless parameters, you can remove the network cable and reboot the DN-13023. DN-13023 will then connect to your wireless network. DN-13023 will detect if a network cable is plugged-in or not. If a network cable is plugged-in, DN-13023 will always connect to the network through the network cable. Otherwise it will always connect to the network through wireless module. Once DN-13023 connects to the network, either by network cable or by wireless module, all operations to use USB device server are exactly the same.

2.3 Assigning an IP Address to the Server

2.3.1 Preliminary

- If you have a DHCP server on your network, your Server will receive an IP address automatically. The IP address will then appear on the *Control Center* or on the page of configuration report that you printed earlier. If your DHCP server does not give an IP address to the Server, the Server will use the automatic private IP addressing IP: 169.254.0.0. ~ 169.254.255.255
- If you are not working in a DHCP network, you need to manually set the Server's IP address.

2.3.2 IP Address

Unless you are assigning an IP address using DHCP, you must obtain an unused IP address from your network administrator.

2.3.3 Methods for Setting the IP Address

You can set the IP address of your Server using one of the following methods, depending on your network operating environment:

- Automatic IP Address Assignment
- Manual IP Address Assignment

2.3.4 Setting the IP Address Using DHCP

Follow the instructions below to get an IP address using DHCP:

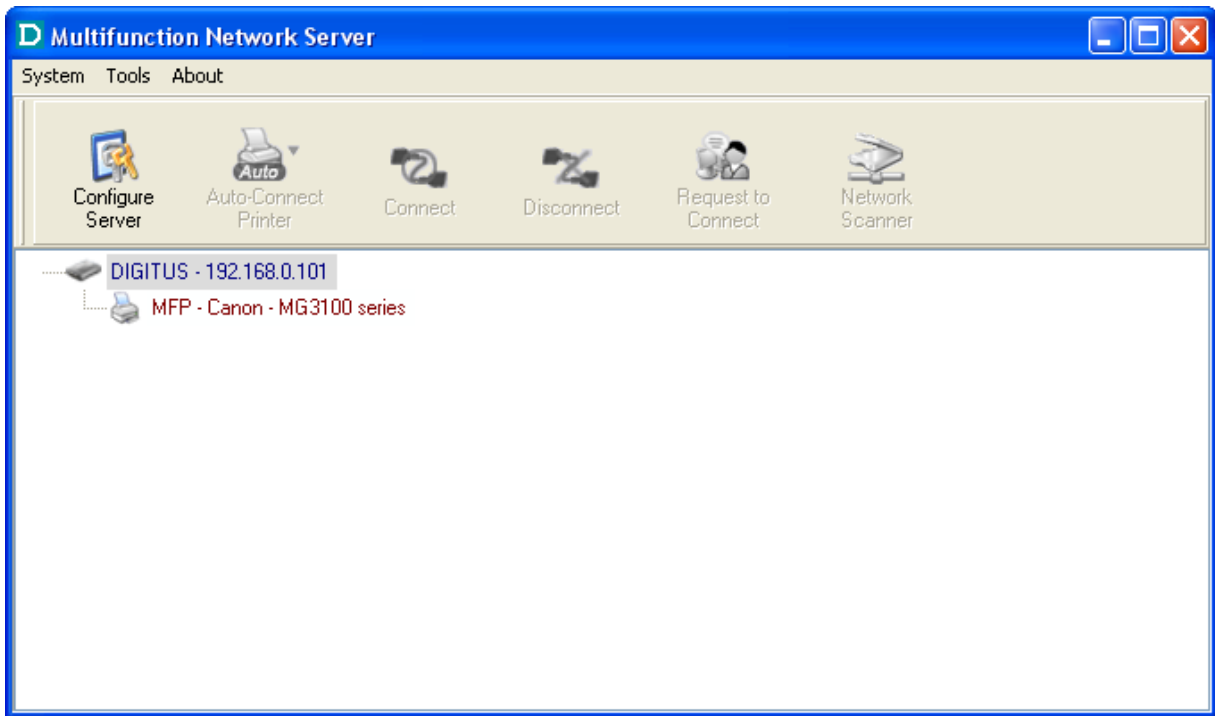

1. Edit or create a scope in the DHCP manager of the DHCP daemon. The entries included in this scope should contain the following parameters:
 - range of IP addresses
 - subnet mask
 - default router IP address
 - DNS server IP address
 - lease duration
2. Activate the scope. The Server automatically gets the DHCP parameters. If you are using DNS, you may include at least one DNS server IP address in the DHCP scope or manually set the DNS server IP address using Server's web pages or the Control Center.

2.3.5 Setting the IP Address Using the Control Center

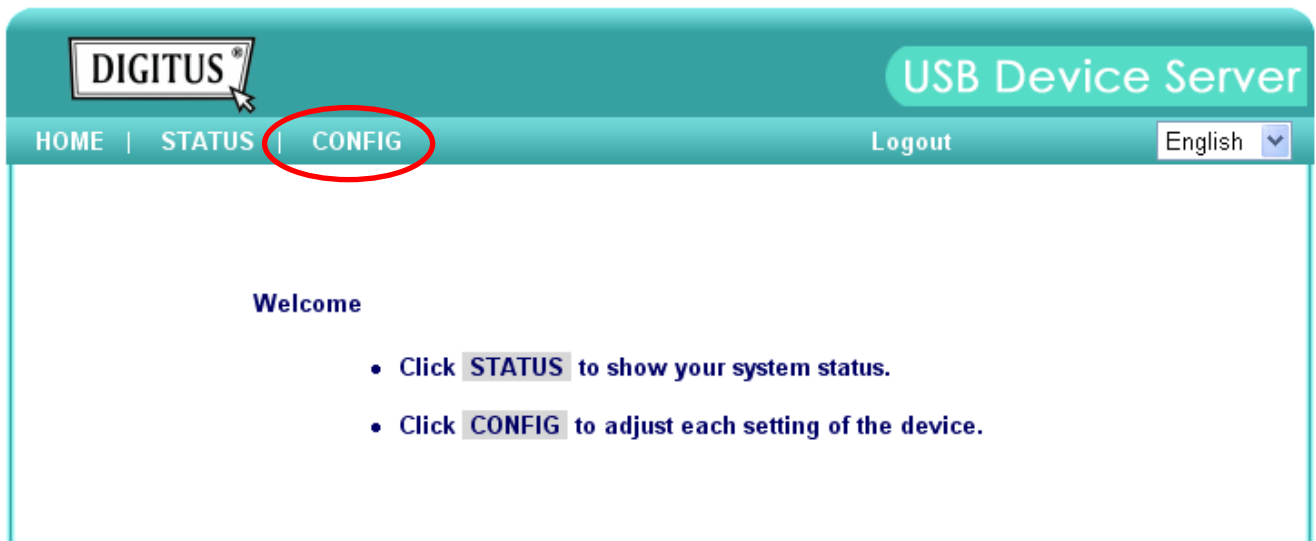

1. Install the Control Center. The Control Center is available on the Product CD.
2. Start the Control Center and Auto-searching Server window will appear.

3. If the tool finds multiple Servers in your local area network, then you have to select one Server from the Server List.

4. Double click the highlighted server (or click the “Configure Server” button) to get the server’s web pages. Click CONFIG icon.

5. Login with administrator ID (default: admin) and its password (default: admin).

DIGITUS USB Device Server

HOME | STATUS | CONFIG Logout English

General | Wireless | Administrator | Maintenance

Server Information

Server Name	DIGITUS	15 letters[max.]
Workgroup	WORKGROUP	15 letters[max.]
Description (optional)	DIGITUS Multi Function N	48 letters[max.]

Storage Access Mode

Server Mode
 NetUSB Mode

TCP/IP

Automatically get IP by DHCP
 Static IP

IP Address	192.168.0.101	15 letters[max.]
Subnet Mask	255.255.255.0	15 letters[max.]

6. Click the button corresponding to your choice of IP setting methods (static or dynamic using DHCP). When assigning a static IP address you also have to define Subnet Mask.
7. Click Submit to save your settings. And the Server will reboot. You have now finished the procedure of setting the IP address.

Chapter 3 Using the USB Device Server

3.1 Introduction

The goal of this produce is to provide the USB device server in a single product. We developed a new technology called “NetUSB” to achieve this goal. Basically, the “NetUSB” is a “USB over IP” technology that transparently redirects all USB packets to TCP/IP network channel. “NetUSB” allows you to use USB devices as if they were connected directly to your PC although they are actually remotely connected to the USB device server.

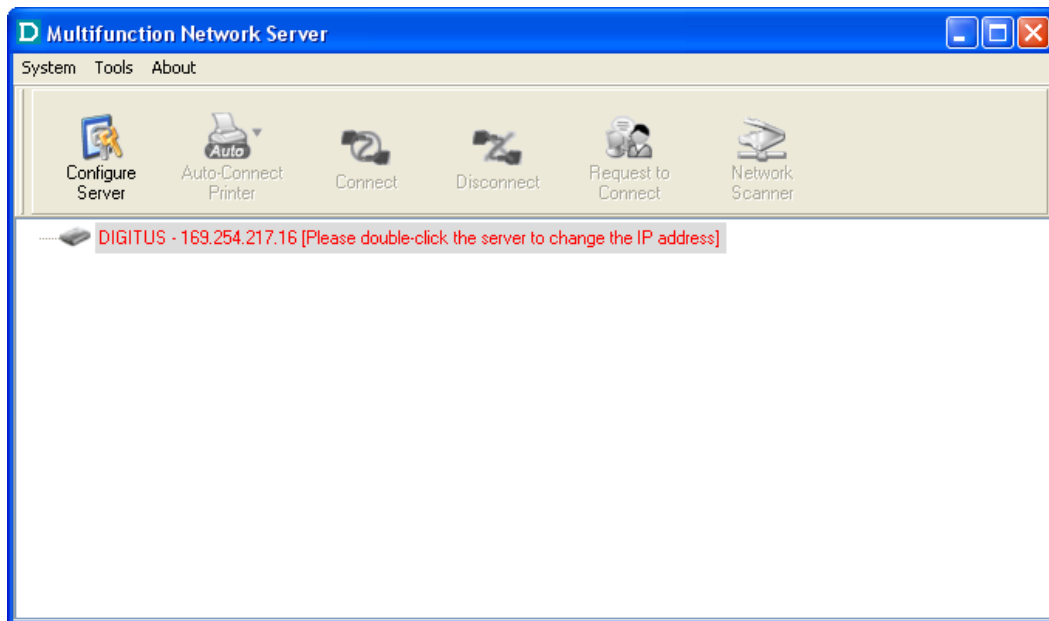

3.2 Connect & Disconnect

“NetUSB” allows you to use USB devices as if they were connected directly to your PC although they are actually remotely connected to the USB device server. The “connect” operation is a software operation that simulates an actual USB device plug-in. That is to say, when you do a “connect” operation in the Control Center, PC can then detect a USB device’s plug-in, although actually you do not plug in any USB device. Similarly, the “disconnect” operation is a software operation that simulates the disconnection of the USB device. Once the connect operation is successful, the operations to use that USB device are just the same as if the USB device is directly connected to the PC.

If a USB device is “connected” by a PC, we say that PC has the ownership of the USB device. Only one PC can get the ownership of a USB device at the same time. Therefore, if a USB device is connected by one PC, no other PC can connect this USB device until this USB device is disconnected.

3.3 Subnet Issue

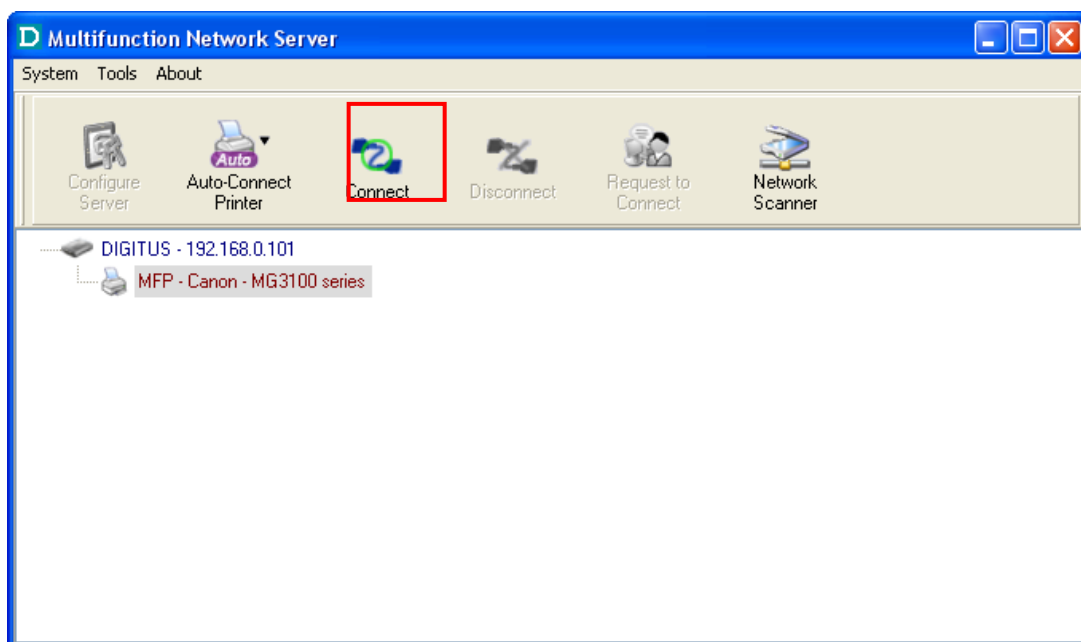

Before using the NetUSB technology, you must first make sure that your PC can access USB device server via TCP/IP. The simplest way to do this is using “Control Center” to search for the USB device server on the network and change its IP address to be the same subnet as your PC. If the server and your PC are not in the same TCP/IP subnet, Control Center will show the server in red, as the following figure. You must change the IP address (or using DHCP) of the server so that the server and your PC are in the same subnet. Control Center will show these servers in blue, meaning you can access these servers by the NetUSB technology.

3.4 Installation of USB Device Driver

Some USB devices, like printers or MFPs (multifunction printers), require to install vendor-supplied driver (usually on CDROM). For those USB devices that do not need to install driver, please skip this section.

- A. Insert the CDROM into the CD drive and run the “autorun” program.
- B. Follow the instructions of the installation program to install driver.
- C. When the installation program asks you to plug-in the USB device, run the “Control Center”.
- D. In the Control Center, click the USB device server that has the desired USB device attached.
- E. Click the desired USB device as the following figure.

- F. Click the “Connect” button. Then the message “Manually Connect by your_computer_name” will be shown, as the following figure.

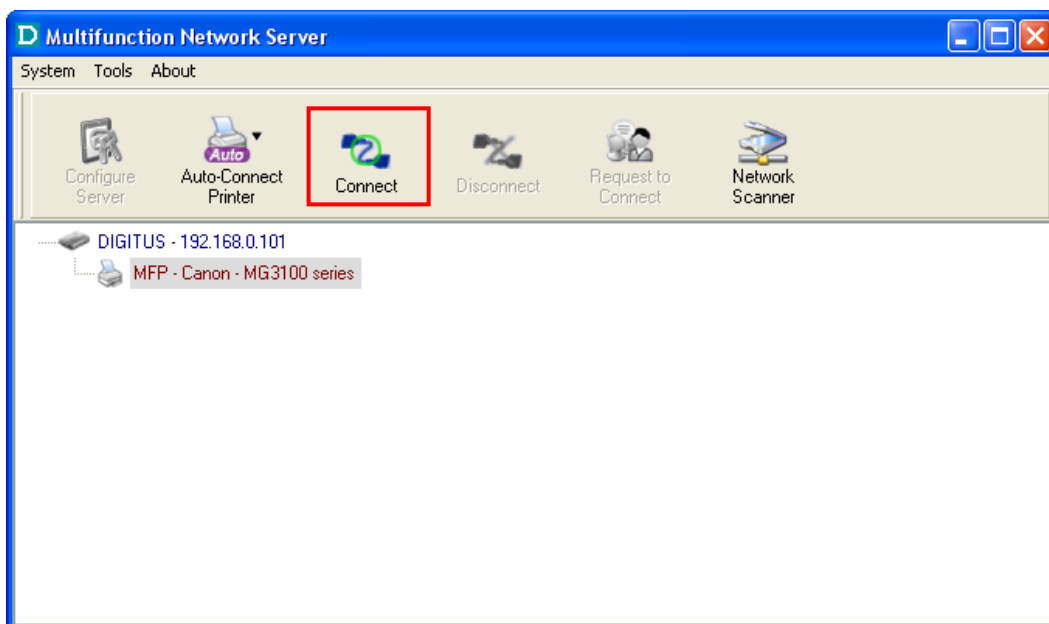

- G. Now, the installation program will detect the USB device and continue to install driver.
- H. After the installation is completed, click the USB device in the Control Center and then click the “Disconnect” button to disconnect the USB device.

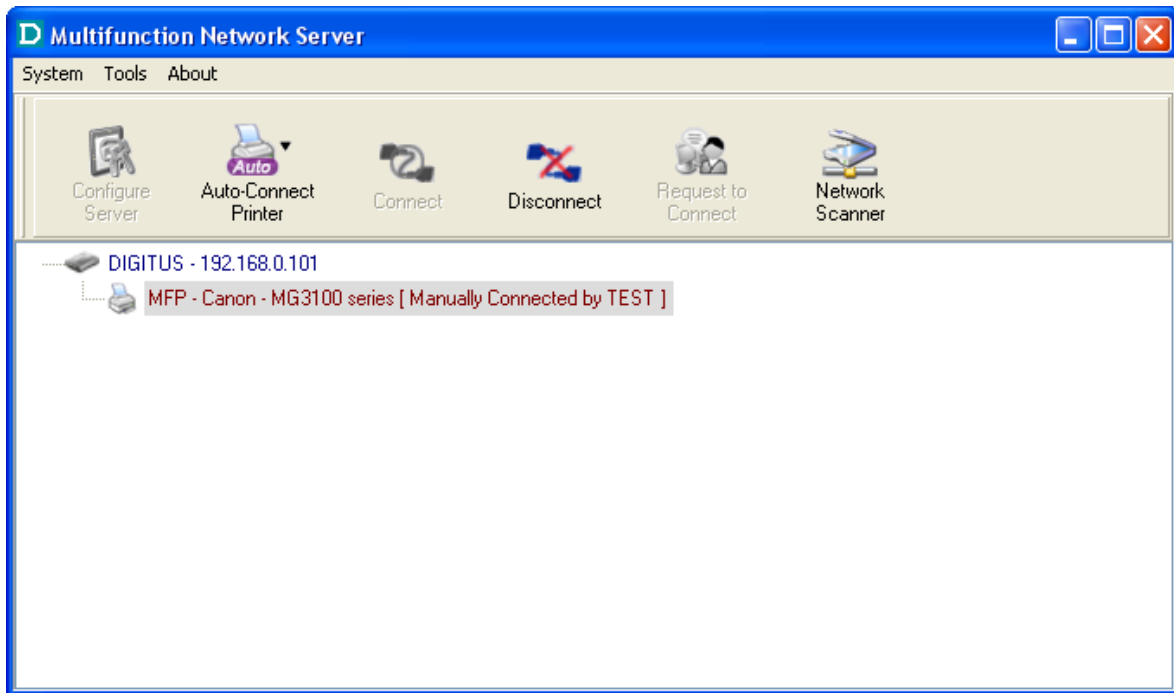

Now the driver of your USB device is installed.

3.5 Using the USB Device Server

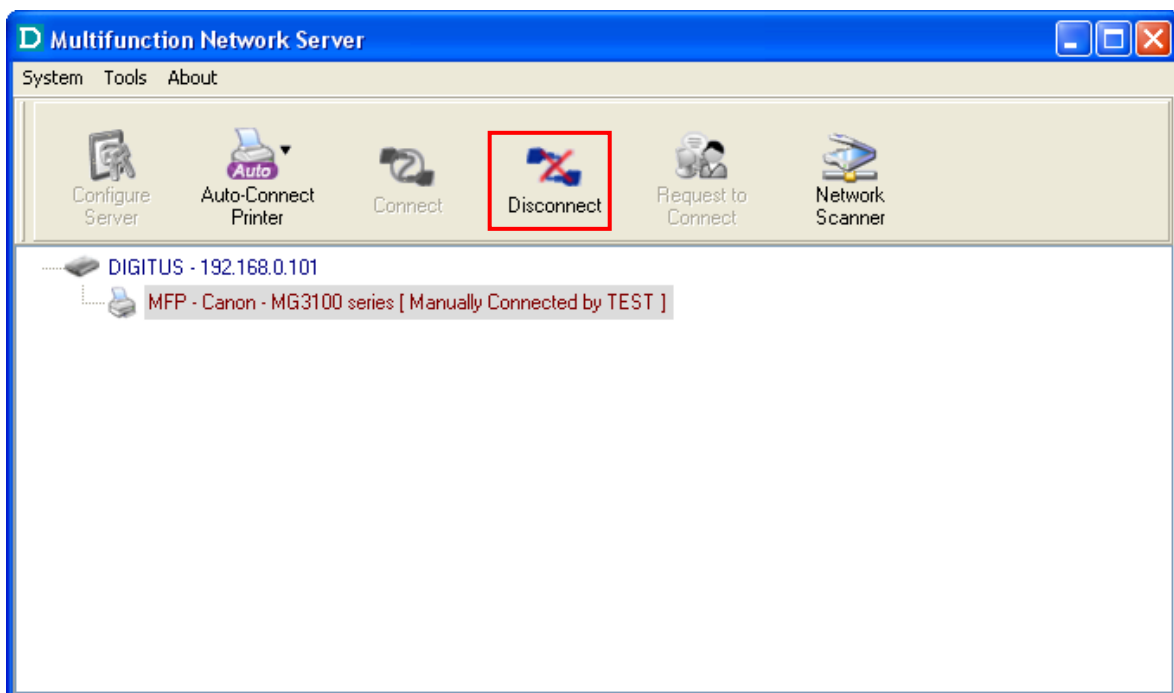

- A. In the Control Center, click the USB device server that has the desired USB device attached.
- B. Click the desired USB device.

- C. Click the “Connect” button. Then the message “Manually Connect by your_computer_name” will be shown.

- D. Now, PC will detect the plug-in of the USB device. The “connect” operation is a software operation that simulates an actual USB device plug-in. That is to say, when you do a “connect” operation in the Control Center, PC can then detect a USB device’s plug-in, although actually you do not plug in any USB device.
- E. Then, just use the USB device as if it is connected directly to your PC’s USB port.
- F. After you finish using the USB device, click the USB device in the Control Center and then click the “Disconnect” button to disconnect the USB device. Other PCs can not “Connect” the USB device until you “Disconnect” that USB device. That is to say, only one PC is allowed to connect the USB device at the same time.

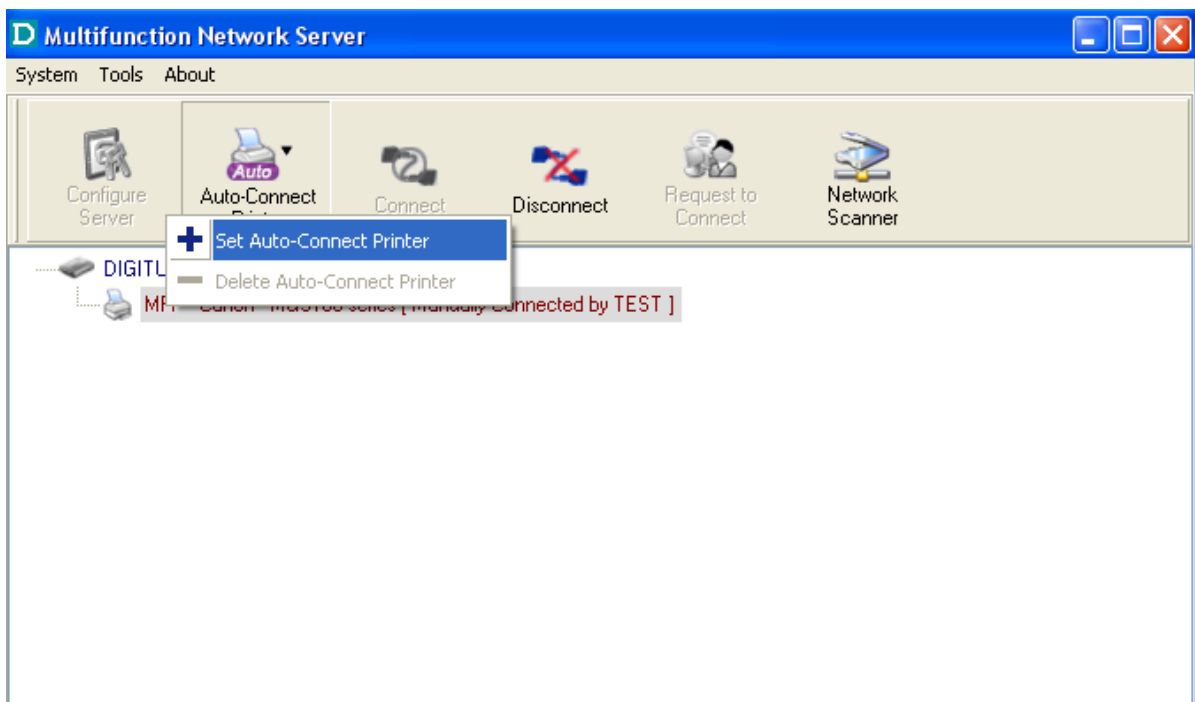

3.6 Auto-Connect Printer

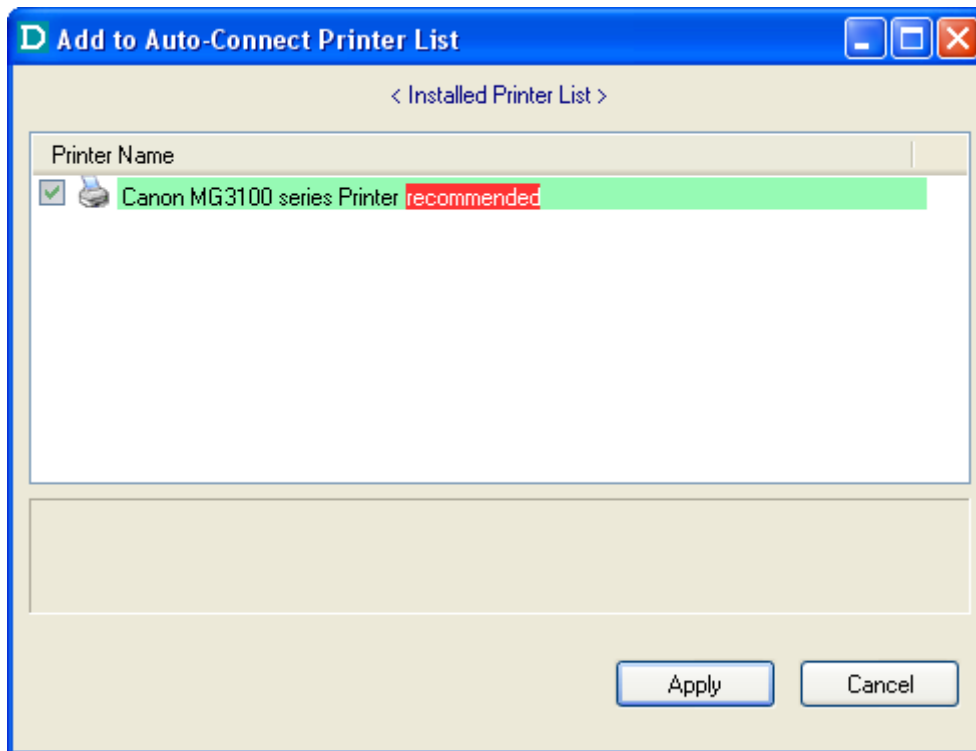

The method described in section 4.5 is so-called manual-connect, which means users must manually connect the USB device before using that device, and must manually disconnect the USB device after using the device, otherwise nobody else can connect this device. However, for printers and scanners (and MFPs), the USB device server supports auto-connect so users don't need to manually connect/disconnect. This and the next sections show you how to do this.

After the driver is installed as described in section 4.4, you can see a newly created printer in the Control Panel's "Printers and Faxes". Follow the steps below to do a NetUSB auto-connect printing.

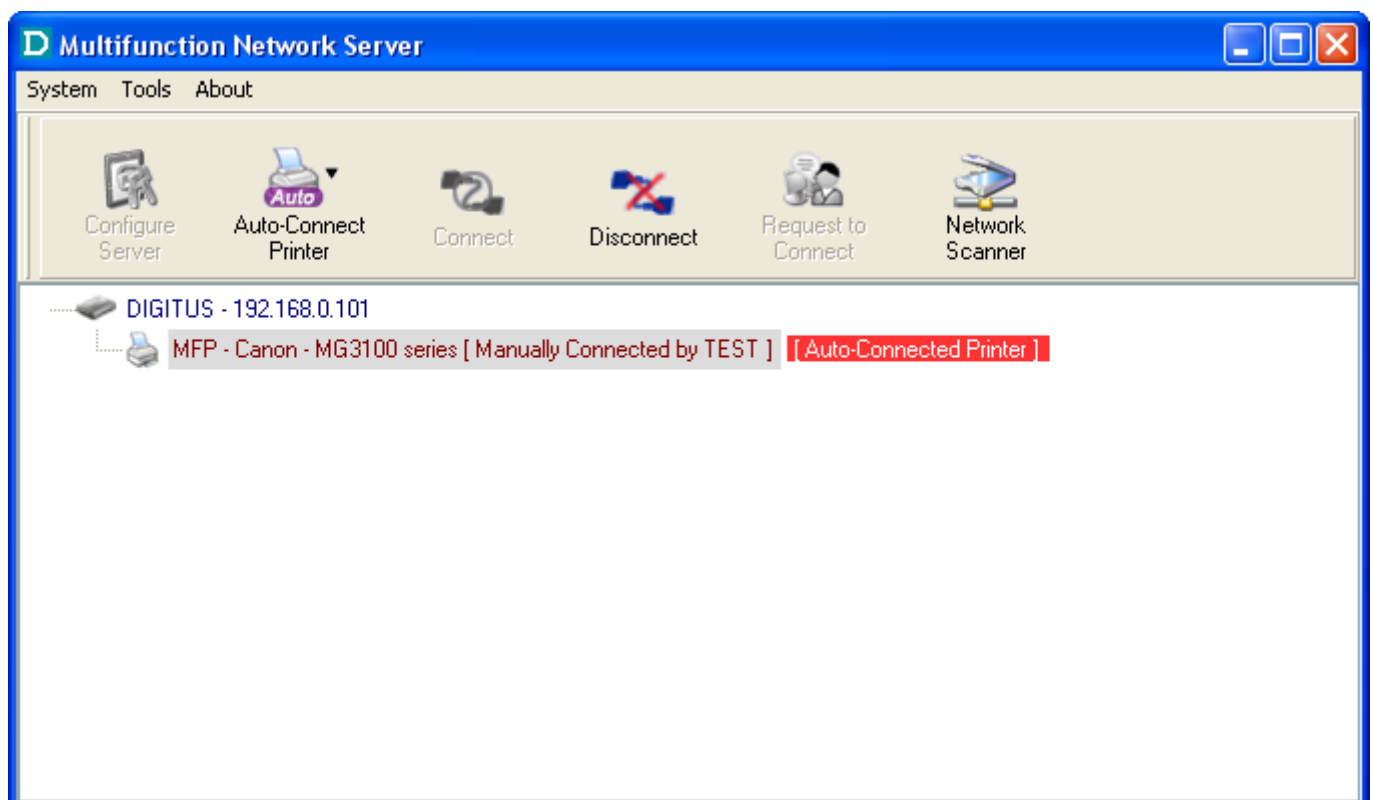

- A. In the Control Center, click the USB device server that has the desired printer (or MFP) attached.
- B. Click the desired printer (or MFP).
- C. Click the "Auto Connect Printer" button and choose "Set Auto-Connect Printer".

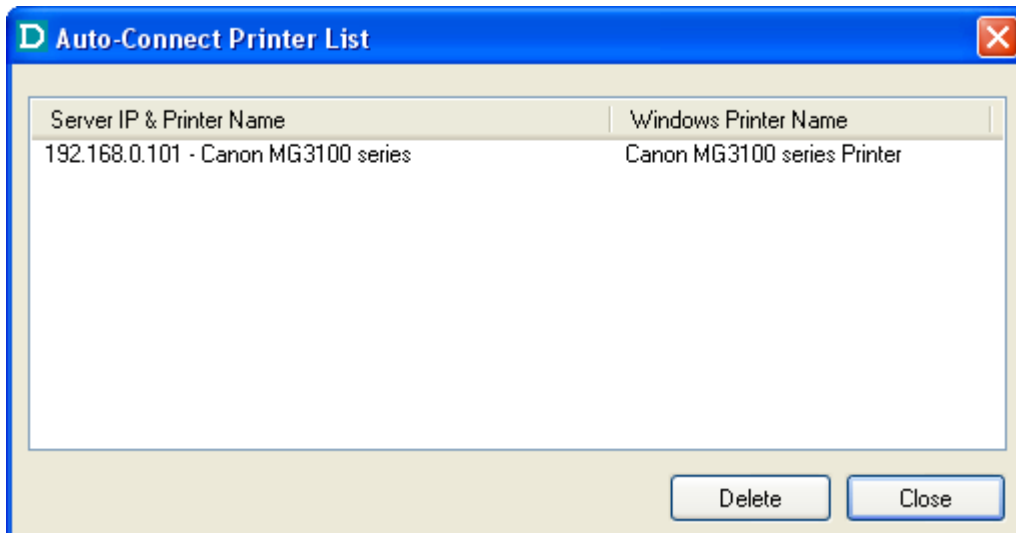

The following figure will appear.

- D. Choose the desired printer. The desired printer must be the Windows printer (this is a logical printer) that matches the printer attached on the USB device server (this is a physical printer). Then click the “Apply” button.
- E. Then, the printer will be marked as an “Auto-Connected Printer” in red. If you choose “Auto-Connected Printer List” in the “Tools” menu, you can see a newly created item that describes the association between the Windows printer and the physical printer on the server.

- F. Then try to issue a print job to the desired printer. You will see the Control Center will automatically do a connect operation. Then, the print job will be issued to that printer.
- G. Even you already properly setup an auto-connected printer, the Control Center must be running (in the background) while a print job is issued. This means you'd better run the Control Center every time after you login Windows. In order to skip this manual operation, you can make the Control Center be run automatically after you login Windows. To do this, choose the "Configuration" item in the "Tools" menu. The following window will appear. Click on the check box and then on the "OK" button. This feature is enabled by default.

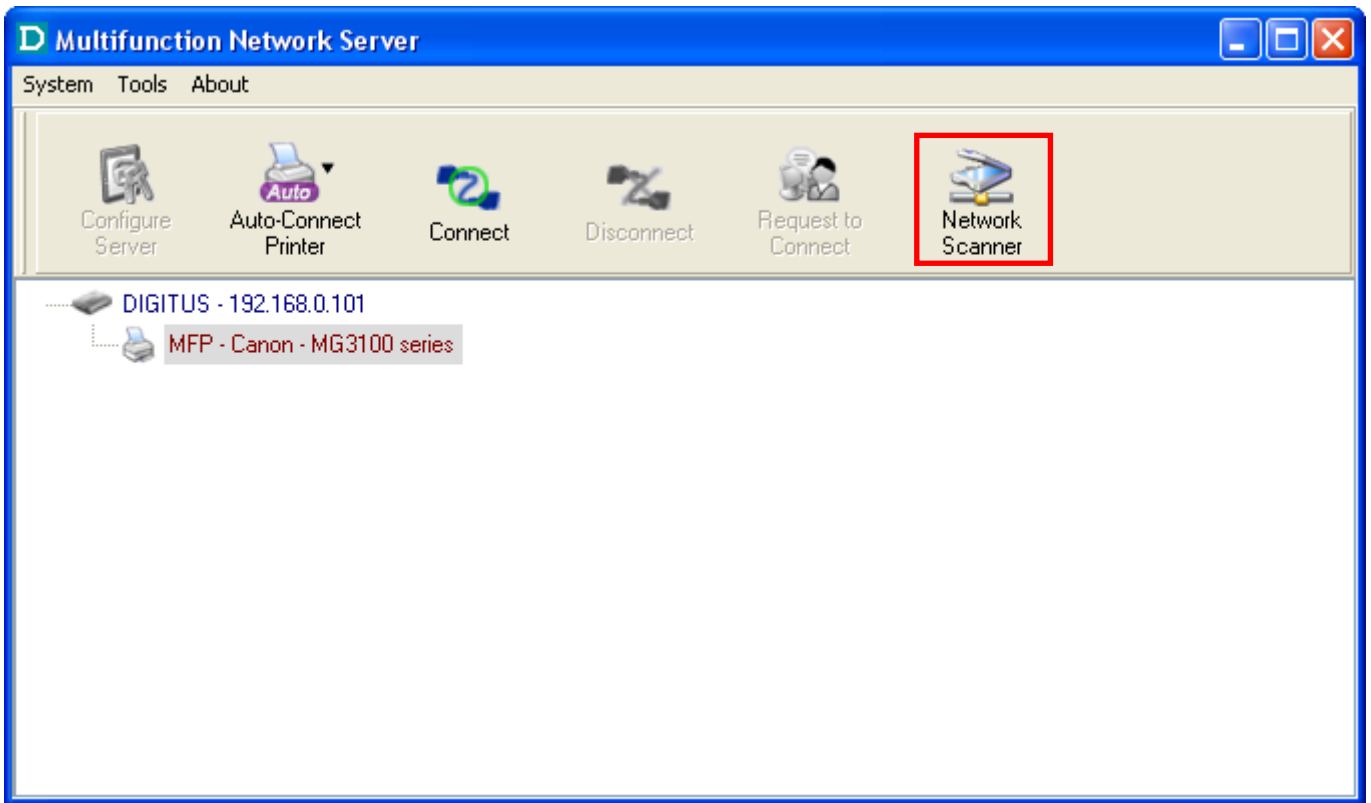

If you would like to break the association between the Windows printer and the physical printer, just click on the association and click the "Delete" button in the "Auto-Connected Printer List".

3.7 Network Scanner

For NetUSB scanning, we recommend you use Network Scanner as the following steps.

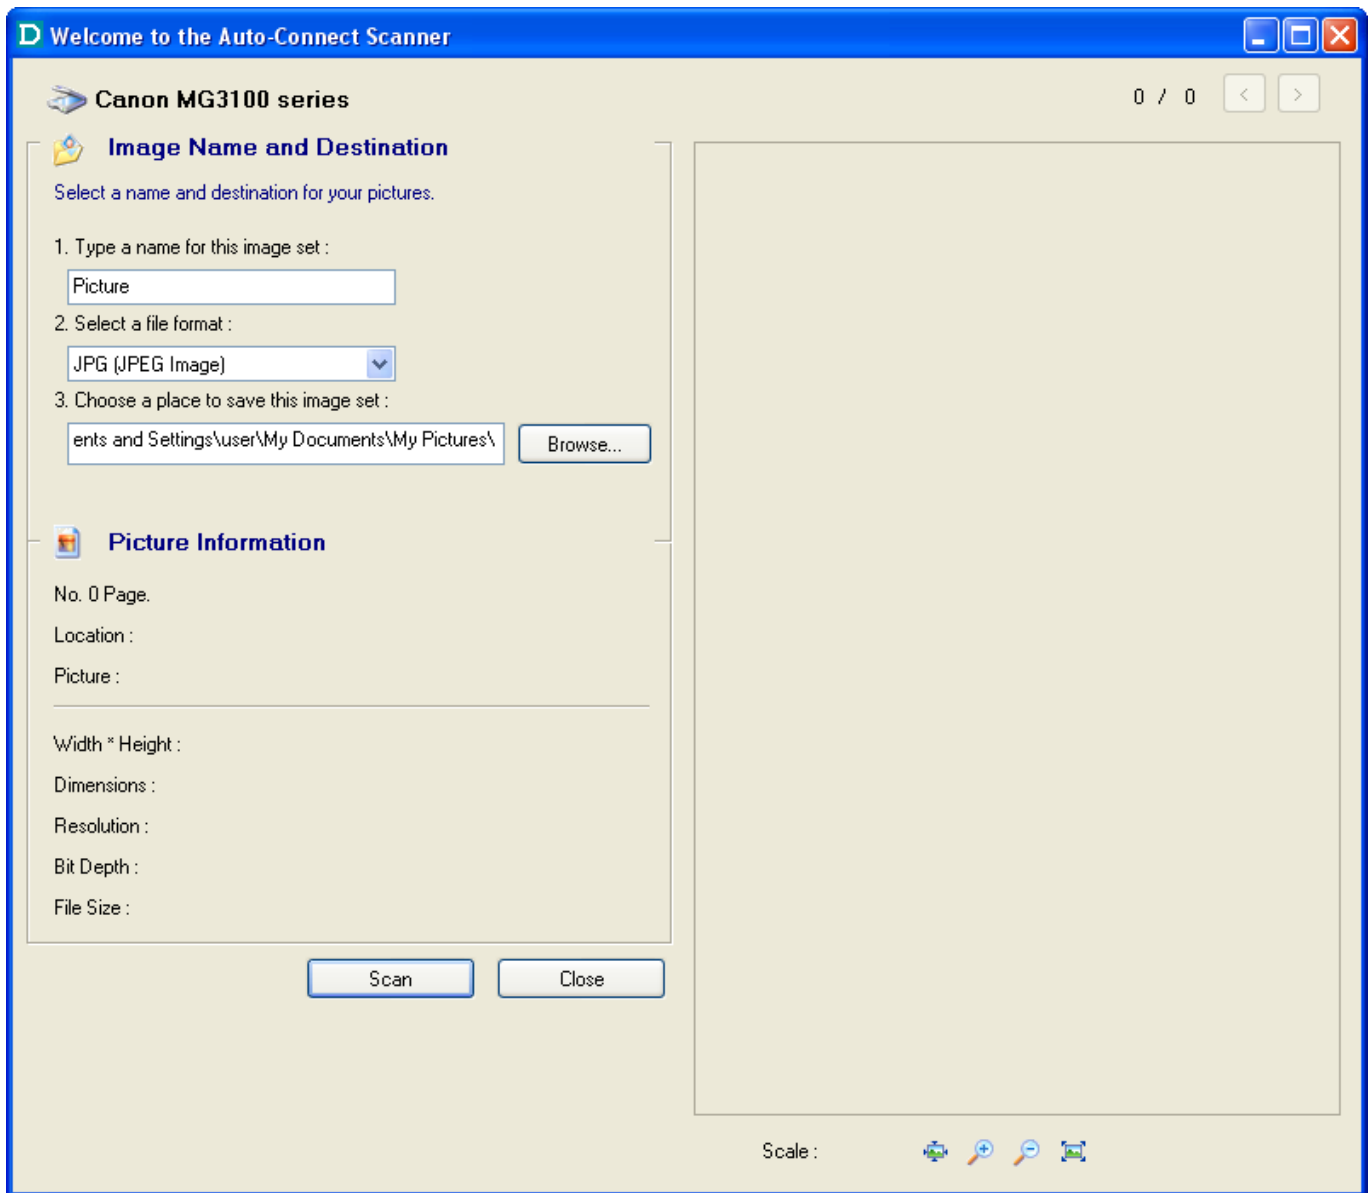

- A. In the Control Center, click the USB device server that has the desired MFP (or scanner) attached.
- B. Click the desired MFP (or scanner).

- C. Click the "Network Scanner" button. Then you can see that the Control Center will automatically do a "connect" operation. The following window will appear.

D. Choose one of TWAIN or WIA item. Click “OK”. The following window will appear.

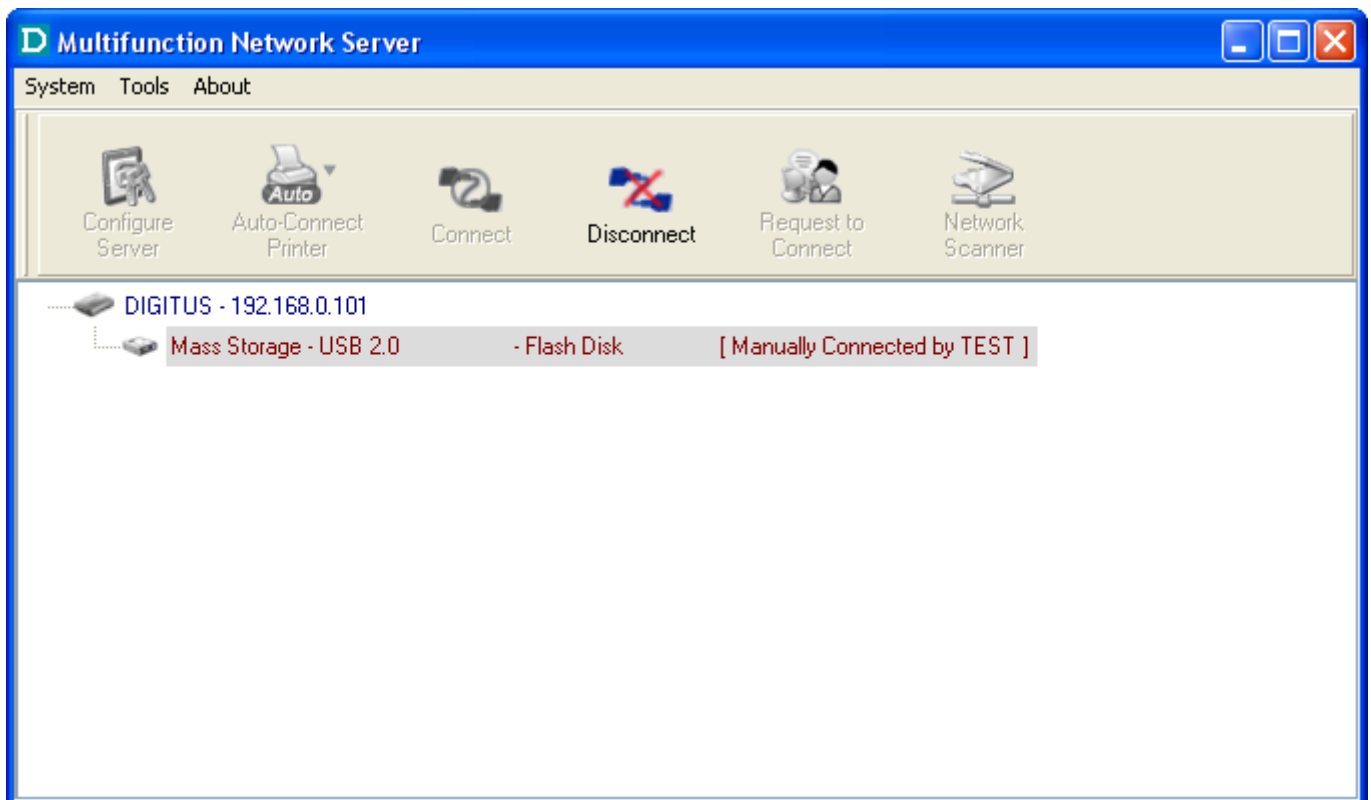

E. Follow the usual steps to do scanning.

F. After the scanning, close the “Auto-Connect Scanner” window. At this moment, Control Center will automatically do a disconnect.

3.8 USB Storage

You must use “manually connect” for USB storage. After you connect a USB storage, like the following picture, your PC will have a new disk. If the USB storage is a flash drive, the new disk is a “removable disk”.

You can see the storage icon in the system tray.

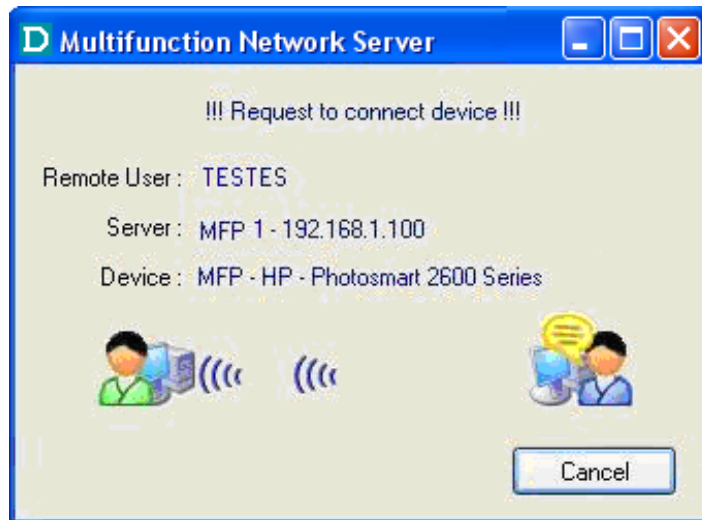

Then just use the new disk as a general disk. After you finish the disk operations, click the storage icon in the system tray and choose “Safely remove USB Mass Storage Device” to remove the USB storage, as the following figure.

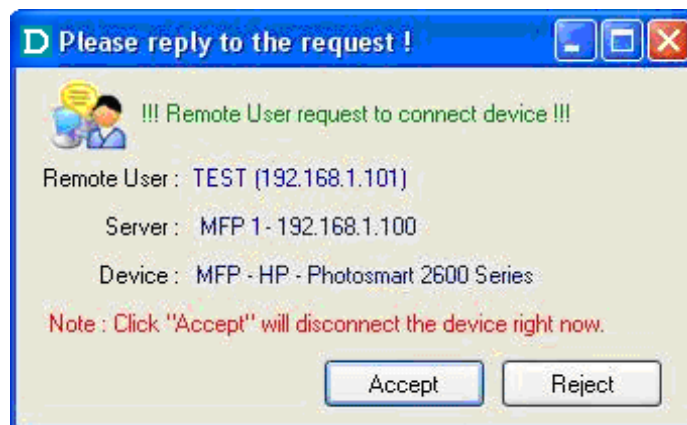

Then, in the Control Center, click the USB storage device and click the “Disconnect” button to disconnect the USB storage device.

3.9 Request to Connect

If a USB device is manually connected by any other user, basically you can not connect that device. However, we offer another mechanism called “Request to Connect” to solve this inconvenience. For example, there are two computers – TESTES and TEST. Now the owner of “HP Photosmart 2600” is TEST. Then, the TESTES computer wants to use this HP printer. The user on the TESTES computer can click the “Request to Connect” button in the Control Center. The following window appears.

At this moment, the user on the TEST computer will see the following window, indicating that another computer – TESTES is requesting to use the HP printer.

The user will choose to accept or reject. If accepted, the Control Center on TEST will automatically disconnect the device and the Control Center on TESTES will automatically connect that device.

3.10 Quitting the Control Center

The Control Center doesn't really quit if you click the "X" box (close box) at the top right corner of the window. Instead, it just minimizes itself to the system tray. There are two ways to really close the Control Center. The first way is choosing "Exit" item in the "File" menu in the Control Center. The second way is right-clicking the icon of the Control Center in the system tray and choosing the "Exit" item.

3.11 Limitations

There are some limitations to use the NetUSB technology.

- A. Only supports Windows 2000/XP/2003/Vista. Windows 98/ME is not supported.
- B. Only one PC can get the ownership of the same USB device at the same time.

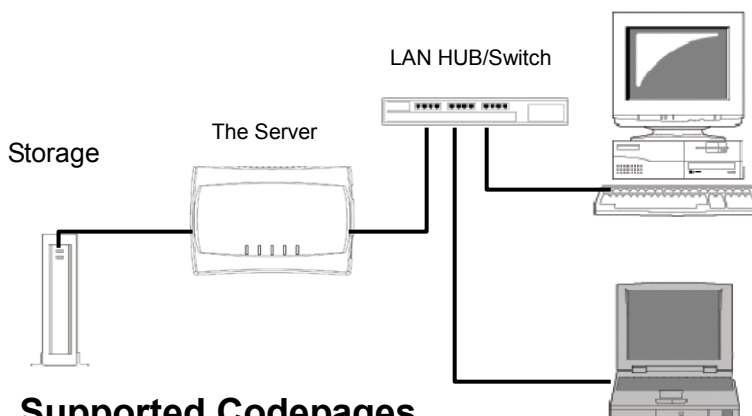

Chapter 4 File Server

This chapter describes the file server function of the Server which allows USB storage devices to be shared across a network by using SMB: NetBIOS over TCP/IP and FTP protocol.

4.1 Preliminary

1. This product supports a file format of FAT12/16/32 and NTFS. However, the “write” operation on NTFS is only supported in NetUSB mode. Please refer to the NetUSB Mode.
2. Corporation is not responsible for the loss or corruption of data in memory devices, including hard disk; Corporation is not responsible for the leak, manipulation, loss, or corruption of data in memory devices connected to the Server after unauthorized access.
3. In order to use the USB Mass Storage device connected to the Server, the SMB protocol or FTP protocol must be set up.

4.2 Connecting USB Mass Storage to the Server

4.3 Supported Codepages

- What is codepage?

Used by the system to encode and interpret string characters. Codepage formats are not the same for each language. Some languages, such as Japanese have multibyte characters, while others, such as English and German, need only one byte to represent each character.

- Filename Encoding of FAT File System

This is known as an 8.3 file name, a short file name using codepage encoding. The FAT file system also supports file names that can be up to 255 characters long. This is known as a long file name using Unicode (UTF-16) encoding.

- When do you need to configure codepage?

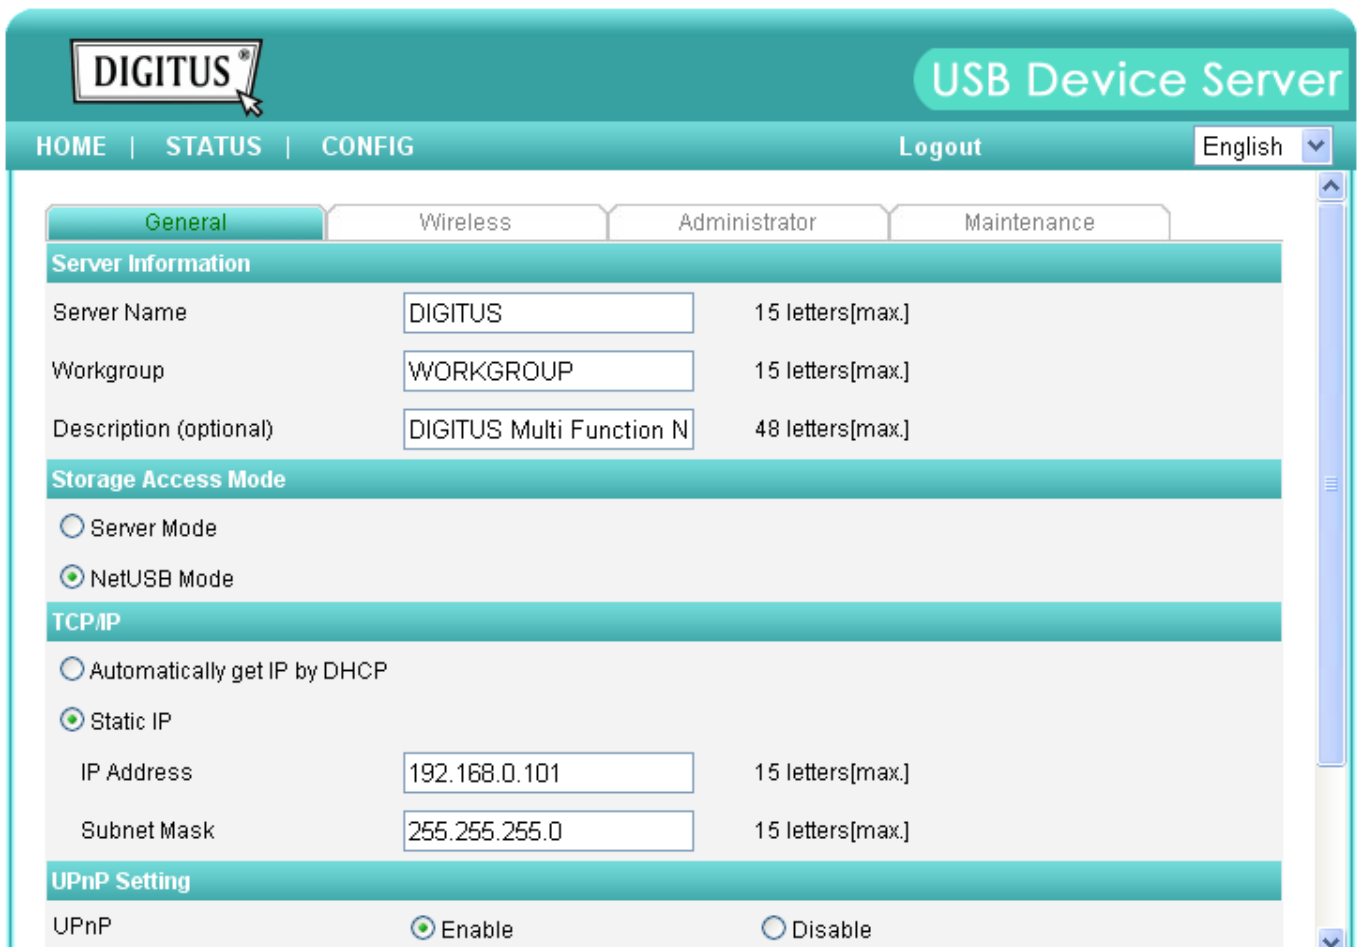

The Server supports Windows codepages. If users want to communicate files using FTP client tool or SMB on Windows 98/Me/2000 with the Server, they have to set their Server codepage to be same as the codepage that their Windows PC is using.

1. FTP
2. SMB on Windows 98/Me/2000

- Configuring the Server's Codepages

Users can use the following methods to set the Server's codepage.

1. Start Control Center and Auto-searching Server window will appear.
2. If the tool finds the Servers in your local area network, select the Server from the Server List and click "Configure Server" button.
3. The Web manager will show, click the "Config" button and enter the Server's administrator (default: *admin*) and password (default: *admin*).
4. After you have logged in successfully, setting **General** configuration dialog appears.
5. Select your codepage form **File Server Codepage** box and click **Apply**.

4.4 Using Shared Storages by SMB/CIFS Method for Windows

1. Connect a USB storage device to this product.
2. Select **My Network Places**.
3. Click **Display the Computers of Workgroup**.
4. Double click **Microsoft Windows Network** icon.
5. Double click the **Workgroup** that the Server belongs to. The default Workgroup name is "WORKGROUP". You can refer to Control Center or the Server's web pages to get it. You will see that the Server is displayed as its server name.
6. If you cannot find Workgroup name of the Server in Microsoft Windows Network, you can select **Search for Computer...** in **My Network Places** and enter the Server Name of the Server to find it.
7. Double click this Server Name icon.
8. If you clear **Enable SMB/CIFS Print/File Server Authentication** in **Supported Protocols**, you login to the SMB server without requiring authentication; otherwise you have to enter user name and password to login to the Server. You can add user name and password in **User Account** box by the Control Center or the Server's Web page.
 **Note:**
*If you use SMB on Windows 98 SE/ME, you must login to your Windows 98 SE/ME using the same user name as in the Server's **User Account**.*
9. The shared folders will be listed as USB1_DyPz, and USB2_DyPz where Dy represents the y-th disk and Pz represents the z-th partition with respect to USB1 port and USB2 port.
10. Perform Open, Paste, Remove or Copy the files to the shared folders.

4.5 Using Shared Storage by FTP Methods for Windows

- A. Use Microsoft IE to the shared USB Mass Storages
 - 1. Open Microsoft IE
 - 2. In **Web Address List**, enter command: “ftp://Server’s *Server Name*“ or “ftp://Server’s *IP address*”. If you have changed the default FTP port : 21 to the new value, you have to add the new port number in the tail of command as “ftp://Server’s *Server Name*: *ftp port*” or “ftp://Server’s *IP address*: *ftp port*”.
 - 3. If you set **Enable Server Authentication in FTP server protocol settings** you have to enter user name and password to login to the Server; if you set **Allow Anonymous Login**, you can use the user name “anonymous” to login with Read-only permission. If you clear Server authentication, you do not need username or password to login to the Server. You can add user name and password in **User Account** box by the Control Center or the Server’s Web pages.
 - 4. The shared folders will be listed in IE.
 - 5. Perform Paste, Remove or Copy the files to the shared folders.
- B. Use Microsoft Dos’s FTP client
 - 1. Enter Dos command “ftp”.
 - 2. Enter “*open server’s Server Name*” or “*open server’s IP address*”. If you have changed the default FTP port : 21 to the new value, you have to add the new port number in the tail of command as “*open server’s Server Name ftp port*” or “*open server’s IP address ftp port*” .
 - 3. If you set **Enable Server Authentication in FTP server protocol settings** you have to enter user name and password to login to the Server; if you set **Allow Anonymous Login**, you can use the user name “anonymous” to login with Read-only permission. If you clear Server authentication, you do not need username or password to login to the Server. You can add user name and password in **User Account** box the Control Center or the Server’s Web pages.
 - 4. Perform FTP commands to use this FTP server.

Chapter 5 The Server's Web Pages

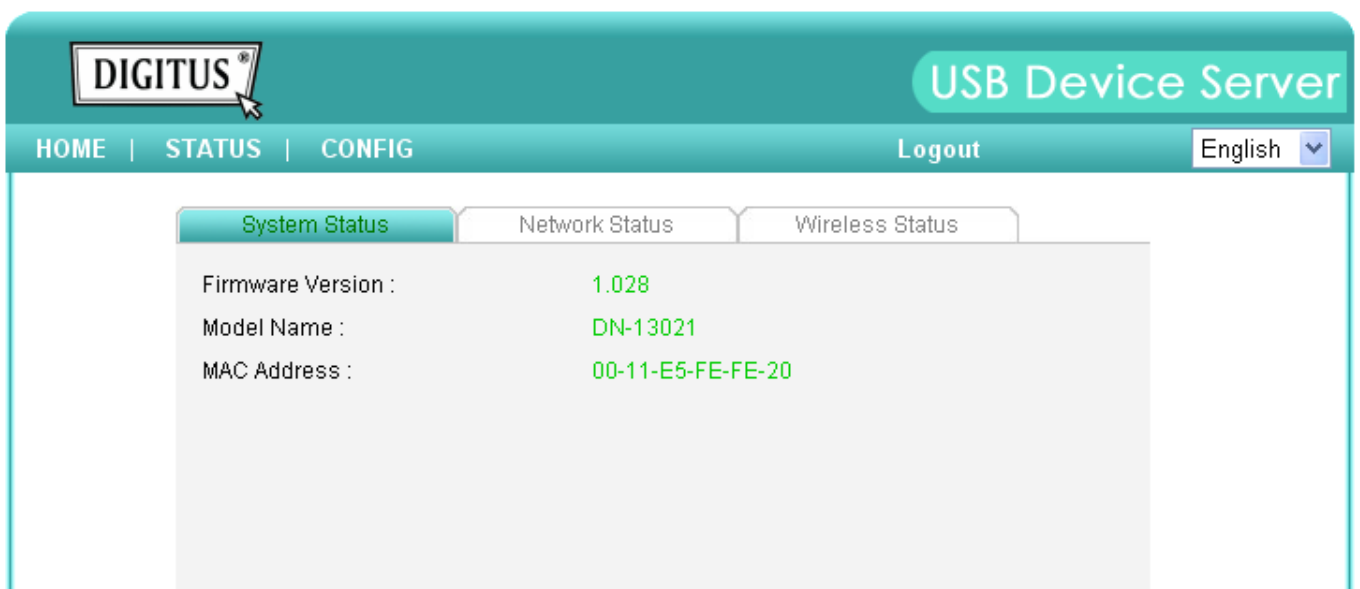

5.1 Introduction

The Server runs the http server, *httpd* on TCP port: 80. Users may use the web pages to see the Server's system status and configure the Server.

5.2 Using the Server's Web Pages

5.2.1 Displaying Server Status

Click on the "STATUS" icon to see system status, network status and Wireless Status (only for DN-13023).

The screenshot shows the DIGITUS USB Device Server web interface. The top navigation bar includes the DIGITUS logo, the title "USB Device Server", and menu items "HOME | STATUS | CONFIG". A "Logout" button and a language dropdown set to "English" are also present. The main content area features three tabs: "System Status", "Network Status" (which is selected and highlighted in green), and "Wireless Status". Below the "Network Status" tab, the following information is displayed:

Server Name :	DIGITUS
Storage Access Mode :	NetUSB Mode
IP Address :	192.168.0.101 (static IP)
Subnet Mask :	255.255.255.0
DHCP Server :	0.0.0.0
Lease Time :	0 second

The screenshot shows the DIGITUS USB Device Server web interface with the "Wireless Status" tab selected. The top navigation bar is identical to the previous screenshot. The main content area displays the following information:

Station Name :	
SSID :	
BSSID :	
Channel No :	
Network Type :	
Link Quality :	
Signal Strength :	
Security System :	

5.2.2 Setting up Server Configuration

To set up the Server configuration, click on the "CONFIG" icon and then the system will request user to enter administrator (default: *admin*) and password (default: *admin*) to login.

■ General Configuration

- ◆ **Server Information:** You have to set the Server Name, which is the name to represent the Server.

Reset

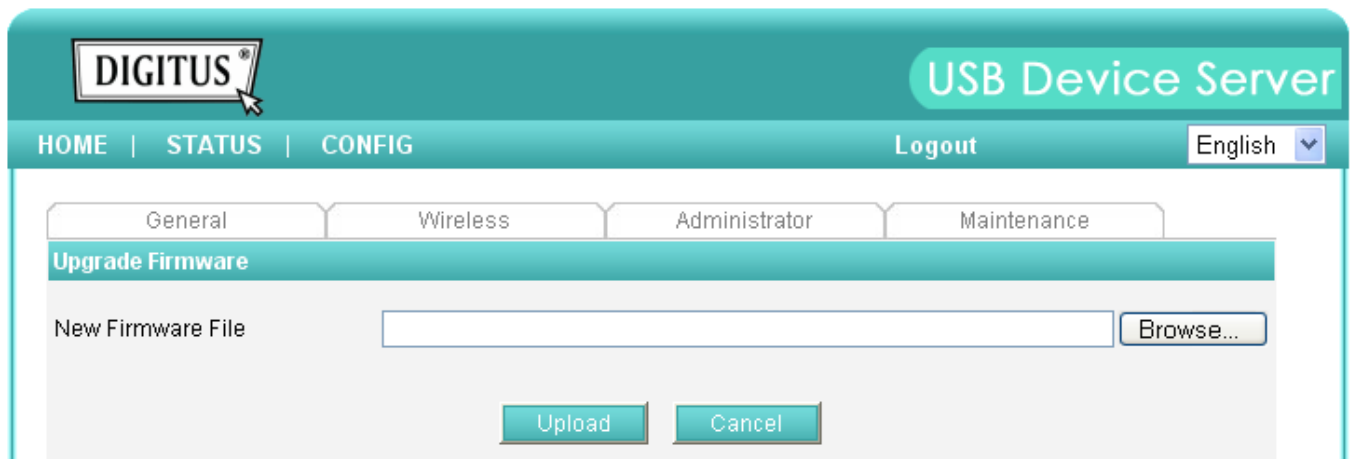

- **Administrator:** You can change administrator name and password. If you forgot administrator name and password, you must perform Restore Factory Default action by plugging in the power adaptor while pressing the Init button. Please refer to the chapter “Restore Factory Defaults”.

- Administrator:* enter your desired administrator name.
- New Password:* enter your desired password.
- Re-type Password:* re-confirm the password.

The screenshot shows the DIGITUS USB Device Server web interface. The top navigation bar includes 'HOME | STATUS | CONFIG', 'Logout', and 'English'. Below the navigation bar, there are tabs for 'General', 'Wireless', 'Administrator', and 'Maintenance'. The 'Administrator' tab is selected, and the page title is 'Set Administrator'. The form contains three input fields: 'Administrator' (with the value 'admin'), 'New Password', and 'Re-type Password'. Each field has a label '15 letters[max.]' to its right. At the bottom of the form are two buttons: 'Submit' and 'Reset'.

- **Maintenance** If you want to restore factory default values of the Server or upgrade new firmware, you can use the Maintenance tool.
 - Restart:** click this button to restart (reboot) the Server.
 - Factory Default:** click this button, the Server will restore factory default values.
 - Firmware Upgrade:** click **Browse** to find the firmware file to be upgraded. Click **Upload** to upload the firmware into the Server.

The screenshot shows the DIGITUS USB Device Server web interface. The top navigation bar includes 'HOME | STATUS | CONFIG', 'Logout', and 'English'. Below the navigation bar, there are tabs for 'General', 'Wireless', 'Administrator', and 'Maintenance'. The 'Maintenance' tab is selected. The page contains three large buttons: 'Restart', 'Factory Default', and 'Firmware Upgrade'.

Chapter 6 Troubleshooting

This chapter provides useful information to help you resolve difficulties that you may experience with your Server. Fault symptoms, possible causes, and remedial actions are provided within a quick reference table. This Server's USB ports only support MFPs, printers, scanners, mass storage, and USB cameras.

6.1 LED Indicators

Indicators	Behavior	Description
Power	On	Power On
	Off	Power off/System error
Link	On	Network connected
	Off	No physical connection to network
Status	Blinking	Activity on network
	Off	No activity on network
USB	On	USB device connected
	Blinking	Connected USB device error
	Off	No physical connection to USB device

6.2 Firewall

If a firewall software has been installed on your PC, it may block the communication between the PC and the USB device server so that the USB device server cannot work properly. To solve this problem, either disable the firewall or configure the firewall to allow the following TCP and UDP ports:

7303, 7305, 20005, 30201, 30202, 30203

Chapter 7 Restore Factory Defaults

You may restore the Server's default parameters by one of the following methods.

1. Please power on the device. Make sure this USB 2.0 Multifunction Network Server can be found by the utility first.
2. Then press the "Init" button for 10 seconds and then release it.
3. Wait for 3~5 seconds, all the LEDs (USB/LAN/WLAN) except Power LED will be off (in order to see the LED going off as indication of factory default, it is suggest to plug in Ethernet cable or USB pen drive to the device first before pressing the init button).
4. Then after another 3~5 seconds, the LEDs (USB/LAN) will be ON again. Then this means the device is applied with factory default.

7.1 Using the Server's Web Pages

1. Go to the Server's web page and click **CONFIG**
2. Enter administrator (default: *admin*) and password (default: *admin*).
3. Click **Maintenance**.
4. Click **Factory Default**.

5. Click **Yes** to confirm

7.2 Using Init Button

Plug in the power adaptor while pressing the Init button until LED indicators of USB1 and USB2 blink. After that, plug off the power adaptor and then plug in the power adaptor again to restart the Server. Finally, the Server will operate using the Factory Default values.

7.3 Default Parameters List

TCP/IP

- Automatically get IP by DHCP: Enabled
- Static IP: Disabled
 - IP Address: 192.168.1.100
 - Subnet Mask: 255.255.255.0

User Accounts

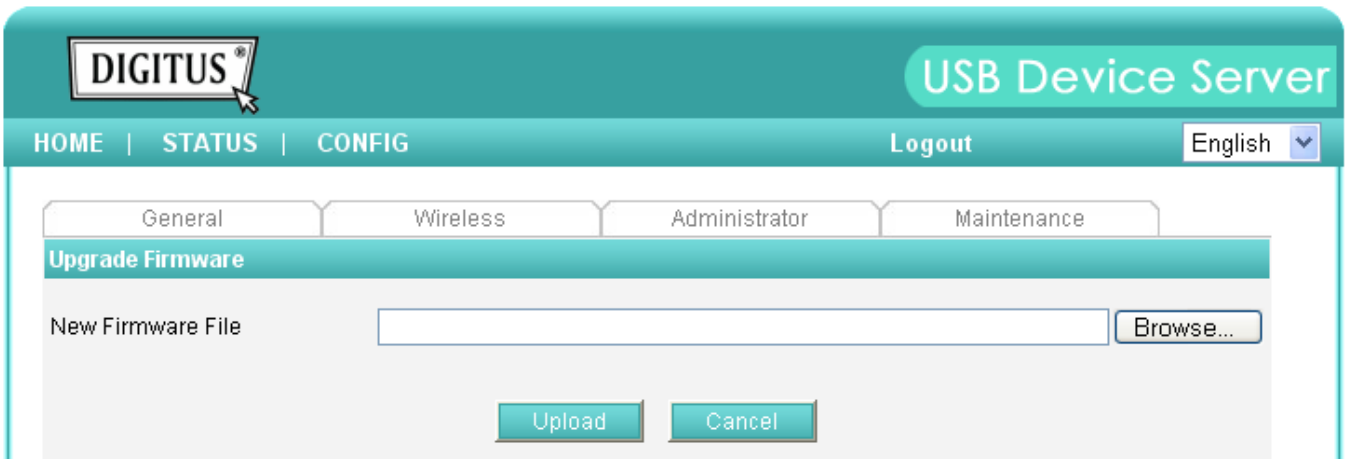

- Administrator: admin
- Password: admin

Chapter 8 Upgrade Firmware

This chapter describes how to upgrade firmware. Please follow one of the following Procedures:

Procedure A: Using the Control Center

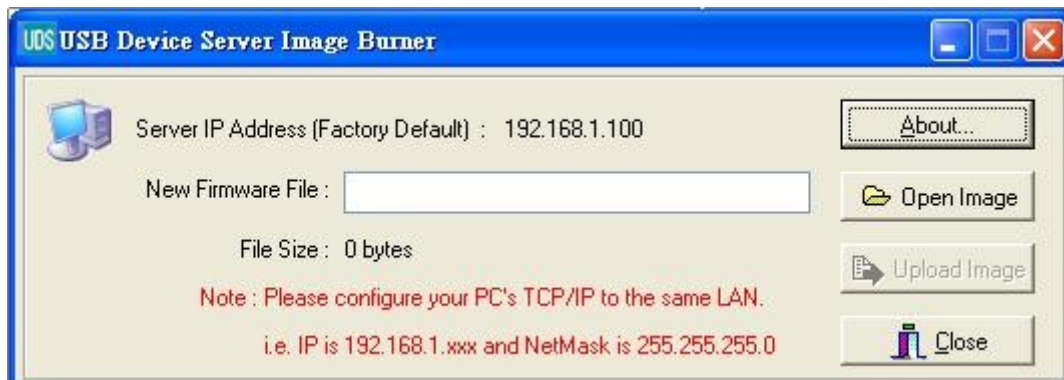

1. Open Control Center. It will automatically search the existing Servers and display their statuses.
2. Select the Server that you want to upgrade the firmware. Double click the selected Server to get the serve's main web page.
3. Click CONFIG icon.
4. Login the Server with Administrator (default: admin) and Password (default: admin).
5. Click Maintenance.
6. Click Upgrade Firmware.

7. Click Browse button to choose the file of new firmware.
8. Click Upload button to start firmware upgrade.
9. Wait for 20 seconds for system reboot.

Procedure B: Using the Init Button and the TFTP Client

1. Plug in the power adaptor while pressing the Init button until LED indicators of USB1 and USB2 blink. **Please note that after that, the Server will operate using the factory default values after restarting, i.e., your Server's configuration will recover to Factory Default values.**
2. Run the TFTP client Tool: *Image Burner*, from Windows Start menu.
3. Click **Open Image** to open your new firmware. Please note that you must configure your PC's TCP/IP such that PC and the Server belong to the same LAN, i.e. PC's IP is 192.168.1.xxx and subnet mask is 255.255.255.0.

(DIGITUS doesn't have this utility.)

4. Click **Upload Image**.
5. Wait for **Image Uploading** to finish and then click **Close**.
6. Plug-off the power adaptor and then plug-in the power adaptor to restart the Server.

Chapter 9 The Init Button

The Init button is used for maintenance: Simultaneously press **Init** button and turn on (by plugging in the power adaptor) the Server until USB1 and USB2 LED indicators simultaneously blink. After that, the Server will do the following tasks:

- A. Perform a Factory Default restoration of the server, which will restore most of the parameters and settings to factory default values.
- B. Perform a TFTP server. You can upgrade new firmware using any TFTP client tool.

Note: After performing the tasks mentioned above, you have to plug off the power adaptor and then plug in the power adaptor to restart the Server.

Chapter 10 CE/FCC Statement

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

IMPORTANT NOTE:

FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

The availability of some specific channels and/or operational frequency bands are country dependent and are firmware programmed at the factory to match the intended destination. The firmware setting is not accessible by the end user.

DN-70542

Technical Description

Frequency Range:

2412MHz-2472MHz (13/9 channels)

Transmit Power: 19.98 dBm EIRP

Hardware Version: 1.0

Software Version: 2.0.6
